

Swap laptop headaches for **secure cloud desktops** — live in weeks, managed for you.

AWS WorkSpaces · Digital Workplace · SMB Specialist

- AI Services Competency
- DevOps Services Competency
- Digital Workplace Services Competency
- Small and Medium Business Services Competency

About us — We design, deploy, and manage cloud desktop environments on AWS — giving your team secure access from any device, without the overhead of managing it yourself.

SOUND FAMILIAR?

- ✗ Laptop refresh every 3–4 yrs costing £1,200+
- ✗ Stolen laptop = data breach risk
- ✗ Remote workers VPN-ing in, painfully slow
- ✗ Patching never fully up to date
- ✗ New starters take days to onboard
- ✗ IT stretched too thin

WHAT WE DELIVER

Cloud Desktops

AWS WorkSpaces Persistent / Pool

Full Windows or Linux desktops in the cloud — accessible from any device, anywhere. Data stays in AWS, never on the endpoint.

M365 BYOL Licensing

M365 E3/E5 · BYOL on WorkSpaces

Already have M365 E3/E5? Use your existing Windows licenses on WorkSpaces and skip the bundled rate. Lower cost per desktop, same experience.

App Streaming

Amazon AppStream 2.0

Deliver CAD, EHR, and legacy apps without a full desktop. Users access via browser — no installation needed.

Secure Browser Access

WorkSpaces Web

Browser-only access to internal apps and SaaS. Perfect for contractors, BYOD, and regulated environments.

Fleet Management

Golden Images + Automation

Automated patching, scaling policies, and golden images. Spin up 50 desktops in minutes.

Security & Compliance

MFA · DLP · Session Recording

Screen pixels only — encrypted in transit. MFA, conditional access, DLP, and session recording.

HOW WE WORK

1

Assess — Week 1–2

Audit your desktop estate, user personas, compliance needs, and map cost vs current spend.

2

Deploy — Week 3–6

Production WorkSpaces with golden images, AD/Entra integration, MFA, monitoring, and UK data residency.

3

Manage — Ongoing

We run it. Patching, scaling, provisioning, cost optimisation, and support — all included.

WHAT AWS MISSES — WE FIX

Identity & SSO

No native IdP integration. We deploy AD / SAML in days.

Self-Service Portal

Client wanted IT off the AWS console — we built them a frontend to manage WorkSpaces.

User Lifecycle

No joiner/mover/leaver automation. Orphaned desktops bill silently. We sync to AD and auto-cleanup.

Image Pipeline

No CI/CD for images. Patching is manual, no rollback. We automate monthly builds with scanning.

Cost Intelligence

No per-user cost visibility or right-sizing. We surface waste and recommend savings.

Compliance Engine

Desktop patching, config drift, and audit trails — automated and reported.

IN PRACTICE

-55%

Reduction in desktop costs

<30m

Agent onboarded from scratch

6wks

Typical time to production

£0

Upfront cost with AWS credits

CLIENTS INCLUDE

+ many more who trusted us

Book a free **30-min Desktop Assessment**.

We'll model your per-user cost vs current spend.
