

AI agents that **actually do the work** — not just answer questions.

AWS AI Competency Partner · Amazon Bedrock AgentCore · Production AI Agents

- AI Services Competency
- DevOps Services Competency
- Digital Workplace Services Competency
- Small and Medium Business Services Competency

We build AI agents that **replace manual processes** — document processors, claims handlers, compliance checkers, customer service bots — deployed on AWS with enterprise security, not a demo on a laptop.

THE PROBLEM

Your team spends hours on tasks a machine should handle. We build the agent, prove it works on your KPI, and run it in production — on AWS Bedrock AgentCore.

AGENTS WE BUILD — BY THE OUTCOME THEY DELIVER

HEALTHCARE & PRIMARY CARE

Intelligent Triage Agent

Reads patient submissions, assesses urgency, routes to the right clinician. 40–60% resolved without a human.

✓ Clinical protocols · Guardrails · Human-in-the-loop

INSURANCE & FINANCIAL SERVICES

Claims & Underwriting Agent

Ingests claims, cross-references policy data, flags fraud, drafts decisions. Days to minutes.

✓ Audit trail · Guardrails · Compliance-first

CUSTOMER OPERATIONS

Support Resolution Agent

Handles queries end-to-end — checks orders, drafts replies, escalates edge cases. 60%+ resolved autonomously.

✓ Connect-ready · Multi-channel · Memory-enabled

LEGAL & COMPLIANCE

Contract Review Agent

Flags non-standard clauses, checks your playbook, generates redline summaries. Hours of review in seconds.

✓ Knowledge base · PII redaction · Version tracking

OPERATIONS & SUPPLY CHAIN

Procurement & Intake Agent

Processes purchase requests, matches suppliers, validates budgets, routes approvals. No more spreadsheet queues.

✓ ERP integration · Multi-agent · Approval chains

DATA & REPORTING

Insight & Reporting Agent

Queries your data, builds dashboards, generates reports, answers ad-hoc questions in plain English.

✓ Code interpreter · Natural language SQL · Scheduled

BUILT ON AWS BEDROCK AGENTCORE — ENTERPRISE-GRADE FROM DAY ONE

Runtime

Serverless, session-isolated microVMs. Scales to thousands. Pay only for what runs.

Memory

Session + long-term memory. Agents learn and maintain context across conversations.

Identity & Policy

OAuth, IAM, SSO. Fine-grained policies control every tool call.

Observability

Trace every decision. Monitor quality, latency, cost via CloudWatch + OpenTelemetry.

HOW WE WORK

- 1 Pick a Process**
Tell us the manual task costing you time. We scope the agent to a measurable KPI.
- 2 We Build & Prove It**
Built on Bedrock AgentCore, tested on your data. Doesn't hit the KPI — you pay nothing.
- 3 We Run It For You**
Production deployment, monitoring, iteration. We don't hand over and disappear.

IN PRACTICE

70%+

Reduction in manual processing

3wks

From kickoff to working agent

£0

If the agent doesn't hit your KPI

WHY RAMBUNCT FOR AI

Production, Not Prototypes

Agents that run 24/7 on AgentCore — not notebooks that die after the demo.

Plugs Into Your Stack

Gateway turns APIs and Lambdas into agent tools. MCP + A2A support.

Security-First

Session isolation, VPC, PrivateLink, guardrails, PII redaction — baked in.

Full Observability

Trace every decision. Debug reasoning. Monitor quality and cost live.

Agents That Learn

AgentCore Memory — agents get smarter over time, remembering context.

Pay-Per-Use

Scales to zero. Charges only for active sessions. We optimise the bill.

CLIENTS INCLUDE

Stream

CHARGE ⚡ HEALTH

Truckup

UGALLERY

+ many more who trusted us

First agent is **free**. Tied to your KPI.
Doesn't deliver? You pay nothing.
